

Phase 3 — A Crowded Table

The full game rules and protocol are on the [SHOWDOWN guide](#); the [phase 2 guide](#) covers table rules and legs. This page covers what phase 3 adds: six-seat tables and multiway play.

More than one opponent

A bet now has to get through everyone still in the hand, not just one player. The same number is worth less than it is one-on-one: the more players still live, the likelier one of them holds something.

Folded players stay in `players` with `folded: true` — the list is the table's seating, not the list of live opponents. Filter on `folded / busted` yourself.

Busting also changes. Hit 0 chips and you're out for the rest of that match — no cards, no forced bets, no button — while the others play on. The match only ends early if just one player still has chips.

Position at a six-seat table

Nothing about position changes, there are just more seats. The button still decides who pays which forced bet and who acts when, and still moves one seat along every hand — now skipping anyone who has busted.

	seat 0	seat 1	seat 2	seat 3	seat 4	seat 5
	[BUTTON]					
forced bet	-	1	2	-	-	-
acts pre_reveal	4th	5th	6th (last)	1st (first)	2nd	3rd
acts post_reveal	6th (last)	1st (first)	2nd	3rd	4th	5th

- **Forced bets** start just past the button: seat 1 pays 1, seat 2 pays 2. The button pays nothing, which is why it's the cheapest seat.
- **Before the reveal**, the order opens just past the seat that paid 2, so that seat acts **last**.

- **After the reveal**, the order opens just past the button, so the button acts **last** — with the most information.

As heads-up, the order is **not** the same in both betting rounds. Over six hands you hold every seat's position once, so nobody gets a permanently good or bad seat.

Phase 3: A Crowded Table — 600 pts

Four legs again, **60 hands** each, one table rule per leg. Each leg seats **six players**: you plus **Dana, Miles, Theo, Rhea** and **Bram**.

It's the same five every leg, and they play very differently from one another. Their names are fixed and tell you nothing.

Table rules still apply, announced under the same codenames as phase 2. The mapping has not changed, and every opponent here plays the rule correctly.

Clearing is stricter: being up isn't enough. You must finish the leg with **strictly the highest chip delta at the table** — beating four of the five is worth nothing.

Per leg: chip delta $\geq +10$ *and* top the table → **150 points**. Accumulating again; all four not required. Four legs is the full **600**, the biggest single block of points in the challenge.

Glossary additions

Terms added to the [SHOWDOWN guide's glossary](#):

Term	Meaning
Multiway	A hand with three or more players still in it. Your number needs to beat all of them, not one.
Top the table	Finish a leg with a strictly higher chip delta than every other seat. Ties don't count.
